Neuroscape News
September 2018

Neuroscape is advancing the world of neuroscience and technology every day. Stay current with this bimonthly update, and also follow us on Facebook and Twitter for the latest news.

GET INVOLVED:

Neuroscape is actively recruiting participants who are able to visit our Mission Bay campus. For more information or to sign up, please see our participation page.

Neuroscape relies on support and participation from people around the world to make its programs possible. Thank you to all our current and past volunteer participants! Even if you have participated in the past, you may still be eligible to participate in further studies.

VIDEO FEATURE:

Sound Health: Rhythm Demo at the Kennedy Center
Neuroscape's Executive Director Adam Gazzaley spoke at the Kennedy Center in Washington, D.C., this month about music, cognition, and the brain, performing a live demo of Neuroscape tech with legendary percussionist Mickey Hart.

CLOSE TO HOME:

Touring Neuroscape with "Neuromelina"
Dr. Melina Uncapher (@neuromelina), who directs the Education Program at Neuroscape, led a public tour of our facilities this month. We offer these tours to the public four times a year, and each tour is led by one of our directors or faculty members. "It’s a fun way for the public to engage with our research and ask questions from experts," says Sierra Niblett, center manager at Neuroscape.

VOLUNTEER SPOTLIGHT:
Adina Greene, an undergraduate student at the University of California, Berkeley, volunteers to run sessions for Labyrinth at Neuroscape. She says this of volunteering at the center:
"Neuroscape is a great place to volunteer not only because of all the amazing studies, but also because of the people. Everyone is always so helpful and more than happy to explain about different studies, certain objectives, or more in depth on any topic you’re interested in. Neuroscape has so many opportunities to learn, whether it be running sessions with participants, data analysis, lab meetings with different speakers, or just talking with all of the different staff members about their life experiences."

**NEUROSCAPE IN THE NEWS:**

[Akili licenses tech from UCSF combining physical activity with therapeutic video games](https://example.com):

"The cognitive benefits of physical activity have been understood for many years,” said Adam Gazzaley, founder and executive director of the Neuroscape lab, and co-founder and chief scientific advisor at Akili. “The ability to generate those benefits through technology that directly engages brain networks associated with cognitive control is extremely exciting.”
